

# CS 346: Daily Standup

Team #: 105

Date: Friday, March 17

## Questions

Enter comments below. If a team member is absent, fill in their name, and put a line through the answer section.

| Name     | What have you completed since last meeting?  | What are you going to complete today?   | What obstacles are in your way?  |
|----------|--|---|--|
| Rebecca  | Completed search bar and ability to search note by title   | Disabling duplicate note and folder naming  |  |
| Parathan | Look into implementing service to save and retrieve data to JSON file                            | Implement service for JSON file   |  |
| Diana    | Implemented the Recently Deleted Folder on the front-end and its logic (boolean field in class). | Edge cases for Recently Deleted Folder: <ul style="list-style-type: none"><li>1. Recently deleted folder cannot be deleted</li><li>2. Files cannot be moved to Recently Deleted Folder</li><li>3. Only deleted file gets moved to Recently Deleted Folder</li></ul> | The database logic in the main branch is causing a lot of conflicts with the front-end implementations. Currently my changes only run when some of the code from main is commented out; need to figure out a way to re-integrate the code later so that it's compatible with my changes. |

|        |   |  |  |
|--------|---|--|--|
| Hamzah | Attempted to explore different strategies for displaying rich text besides using HTMLEditor due to running into major bugs, decided to stick with HTMLEditor after finding workarounds to bugs, particularly with undo/redo and keyboard shortcuts. | Cleaning up application code by separating data and functions that manipulate data into a model-view-controller setup. |  |
|--------|---|--|--|

## Outstanding

## Decisions

Is there anything else we should capture from this meeting?

Team #: 105

Date: Wednesday, March 22

## Questions

Enter comments below. If a team member is absent, fill in their name, and put a line through the answer section.

| Name | What have you completed since last meeting? | What are you going to complete today? | What obstacles are in your way? |
|------|---|---------------------------------------|---------------------------------|
|------|---|---------------------------------------|---------------------------------|

|          |  |   |   |
|----------|--|---|---|
| Rebecca  | Disabled duplicate note and folder naming  | resolve merge conflicts from other people's branch regarding my code  | Start function error not allowing me to run on certain branches   |
| Parathan | Implemented Service for using JSON file for data storage   | Switch from JSON file to database that stores user id and relevant JSON data for that user, and change service to work with this  |   |
| Diana    | <p>Edge cases for Recently Deleted Folder:</p> <ol style="list-style-type: none"> <li>1. Recently deleted folder cannot be deleted</li> <li>2. Files cannot be moved to Recently Deleted Folder</li> <li>3. Only deleted file gets moved to Recently Deleted Folder</li> </ol> | <p>Rest of the edge cases for Recently Deleted Folder:</p> <ol style="list-style-type: none"> <li>1. The files are deleted permanently once deleted in the Recently Deleted Folder</li> <li>2. Recovering the file from Recently deleted</li> <li>3. If a folder is deleted, all of its contained notes go to Recently Deleted</li> </ol> | <ul style="list-style-type: none"> <li>● Hamzah recently pushed in a new commit to main that cleans up the entire code and separates them into different structures and modules. I need to restructure my code so that it is compatible with his changes.</li> <li>● Solve merge conflicts</li> </ul> |
| Hamzah   | Made application code more modular by separating data and functions that manipulate data into a model-view-controller setup. Application now has a central model that the controllers access to manipulate data.   | Need to work with Diana to add Recently Deleted Folder functionality to the new model system, since she was working on her feature before my commit.  | Need to solve resulting merge conflicts without affecting other components of the application.  |
