CS 346: Daily Standup

Team #: 105   Date: Friday, March 3

Questions

Enter comments below. If a team member is absent, fill in their name, and put a line through the answer section.

Name	What have you completed since last meeting?	What are you going to complete today?	What obstacles are in your way?
Rebecca	sort folder by date modified, date created and title	making sort button on menu bar rather than pop up	nested menu bar isn't working but can just make it a single layer menu bar for "sort folder by"
Parathan	Implemented html editor that can be used for text styling, cut,copy and paste, undo,redo	Implement database to persist note data	Determining the appropriate way to save the data right now. Database may be more complicated than necessary.
Diana	Cleaned up the UI (menu bars) to adjust to the html editor, added the "Move File" button	Creating a feature that moves notes to different folders	Looking into a dialog GUI that supports this feature
Hamzah	Looked into how setup filters for multi-key operations	Saving font styles to notes so that they persist when changing between them	Need to work with Parathan to determine the best way to store HTML text before continuing

Outstanding

Decisions

Is there anything else we should capture from this meeting?

Team #: 105   Date: Wednesday, March 8

Questions

Enter comments below. If a team member is absent, fill in their name, and put a line through the answer section.

Name	What have you completed since last meeting?	What are you going to complete today?	What obstacles are in your way?
Rebecca	- Fixed sort folder by to be in menu bar with no popup - added hotkeys for windows users	add date modified to display in the notes list	not sure how I will implement displaying modified date
Parathan	Looked into the different ways to store data for the notes data	Implement persistence through either a JSON file so note data persists locally	Don't know how to do web services yet so will need to find a way to store data remotely and retrieve it without a web service
Diana	Worked on moving notes to different folders	Add error handling for when notes are moved to invalid folders	Need to figure out a way to know if - the clicked item is a folder or a file

			- The selected folder is invalid (does not exist)
Hamzah	Implemented functionality to save font styles (sizing, color, bold, italics, etc.) to individual notes	Implement Undo/Redo features	Choosing a design pattern (Command or Memento) and exploring the tradeoffs
