CS 346: Daily Standup

Team #: 105   Date: Friday, Feb 10

Questions

Enter comments below. If a team member is absent, fill in their name, and put a line through the answer section.

Name	What have you completed since last meeting?	What are you going to complete today?	What obstacles are in your way?
Rebecca	Worked on Notes Manager class, updating toolbar and menu bar	Figuring out how to bold, italicize, bulleted list etc.	Don't know how to style text in kotlin/javafx text
Parathan	Worked on Notes classes	Work on console app Work on create notes feature for GUI	Don't know how to make console app.
Diana	Jumpstarted initial GUI design with buttons, toolbars, dropdown	Working on folder and notes renaming	Selecting a folder and a note at the same time causes issues
Hamzah	Added List views for notes and folders, added text functionality	Working to create folders and notes and have them updated on list views	Handling how Observable lists work with Mutable lists

Outstanding

Do we need help with anything?
- Console application
- Design pattern
- editing note based on what note you're in

Decisions

Is there anything else we should capture from this meeting?

Questions

Enter comments below. If a team member is absent, fill in their name, and put a line through the answer section.

Name	What have you completed since last meeting?	What are you going to complete today?	What obstacles are in your way?
Rebecca	How to bold/color text	Deciding design pattern implementation. (Command)	How to implement undo redo. Each command has its own undo, redo function?
Parathan	Completed Data Classes Launching app through script	Application Settings	None
Diana	Fixed folder/note renaming by allowing only either one of folder/note to be highlighted at a time through event handling	Working on deleting folder and notes	Not quite sure how to optimally implement the Recently Deleted Folder yet. Will focus on deleting files/folder first before implementing Recently Deleted Folder.

Hamzah	Added functionality to create notes, folders, have them updated on list views; notes that belong to a specific folder will load correctly in its own list view when a folder is selected	Working on saving text that is typed in the field to a note and having it load/unload when the item is selected	Event handling with text areas follows a different process than other JavaFX objects

Outstanding

Do we need help with anything?
- confirming console application launch is working
- need to decide how we want to do the recently deleted folder
- Looking ahead to the next sprint, styling text is tricky.

Decisions

Is there anything else we should capture from this meeting?
- Decided to use command design pattern
